

# AIR|SHIELD<sup>®</sup> SOLUTIONS

## FOR MIRRORS

### Innovative inflatable protective packaging solutions for shipping fragile Mirrors and Artwork

Shipping fragile and valuable commodities through challenging courier networks means an expected element of risk from transit damage. Protecting such objects with traditional packaging is problematic, shippers must expect Damage On Arrival (DoA), with associated costs of recover, repair and replacement!

GAIA is one of the UK's leading In-Box Protection Specialist and our forte is delivering cost effective, proven protective packaging solutions for the most vulnerable, valued and sensitive commodities. Our packaging solutions are backed-up by International Safe Transit Association (ISTA) category 3c drop testing and approval - a benchmark for shipping products / commodities nationally and internationally across courier networks

Designed specifically to reduce damage caused in transit our AIR|SHIELD reinforced inflated corner pieces combined with our universal inflatable AIR|MAT solution provides unique protective qualities over traditional wrap solutions.

Both solutions provide exceptional shock-resistance, dispersing energy from impacts like a shock absorber. As 98% of the solutions is air, the solution adds little to the overall weight minimising shipping costs.

GAIA has strong environment credentials; all our products are reusable and recyclable. Offering unrivalled waste and transactional savings especially in closed loop supply chains.

Call now, for free advice and technical support on your current or future packaging / CSR requirements.
