

# AIR | SHIELD<sup>®</sup> SOLUTION FOR MOBILE PHONES

**GAIA**  
THE IN-BOX PROTECTION SPECIALISTS

As a leading provider of packaging solutions to the refurbish, repair, rework and end of life sector, we have developed multiple one-off and reusable transit packaging solutions for Consumer Electronics, audio and ITC products.

GAIA's protective packaging solution allows you to ship fragile mobile phones cheaply and efficiently. The light-weight, inflatable AIR | SHIELD™ pouch inflates within seconds and cushions the product from all corners, offering optimum protection. No extra void fills are needed. In fact no exterior carton is necessary as the AIR | SHIELD™ can be placed in a mailing bag and safely shipped.

GAIA's AIR | SHIELD™ solution for mobile phones is a fully reusable solution that can be used in many transactions. Within the closed loop supply chain environment, the reusable AIR | SHIELD™ offers great return on investment, with savings found across warehousing and shipping.

Gaia does not expect our clients to compromise on protection, carbon footprint reporting or even price points; typically, our solutions are up to 30% lower than traditional polystyrene and/or void fill based solutions.

And let's not forget in today's "next day delivery" world, lower Damage On Arrival supports your sale process and protects your valuable brand image.

Call now, for free advice and technical support on your current or future packaging / CSR requirements.
