

AIR|SHIELD[®] SOLUTION FOR AUTOMOTIVE PARTS

In challenging assembly environments where 'Just in Time' and 'Six Sigma' are daily work practices, the daily movement of thousands of inventory items bring the most hard bitten supply chain professional to tears! How can you minimise DOA's and ensure safe delivery of critical assembly parts, whilst reducing cubic size and CO2 emissions...

If you wish to protect fragile LED bulbs or bulky/heavy headlamp assemblies or windscreens, GAIA has developed tried and tested solutions for the most challenging of specifications.

Our unique, inflatable AIR|SHIELD™ core packaging solutions have been designed to protect goods in the most challenging courier networks; original solutions developed in Consumer Electronic aftersales support sectors were designed for 70" flat screen TV's within courier networks. You can be sure your product will be secure!

Additionally, we generally reduce the cubic size of the packaging, significantly improving packing efficiency and scalability of packing lines.
